

[Healthy Water At Home In Denver](#)

Hello Denver **tap water** drinkers. When looking for ways to lead a more healthy life, have you considered the water you drink? Have you thought much about what, exactly, is in your Denver tap water?

Many of us never do, but there are several substances present in municipal water that are potentially dangerous. Tap water additives like **chlorine and lead** from pipes can be toxic. Other water-borne bacteria have developed resistance and outbreaks can occur in water systems. Bottled water is expensive, (more so than gasoline in fact) hard on the environment, and often just reconstituted tap water.

After considering these facts, a Kangen [home water filtration machine](#) is often the best solution for families who want to drink the healthiest water possible.

Seventy percent of the human body is made up of water, so the water we drink is significant to our overall health. Qualified research has shown that by changing the pH balance of the water we use every day, we can reap benefits inside and out!

[Alkaline water](#) flushes toxins from the body as a universal solvent, making it ideal for drinking, while acidic water preserves moisture in the skin. When used externally it supports **keeping skin smooth and youthful looking**, protecting it from harsh environmental factors like cold or dry weather.

The Kangen water machine is a convenient home system that not only filters your tap water, but produces **ionized water** through electrolysis, letting you **adjust the pH** of your water to give you healthy benefits. Ionized water also can neutralize free radicals and drinkers will appreciate the fact that it hydrates without bloating.
